About us

Varian Pharmed is a pioneering pharmaceutical company dedicated to advancing the field of drug delivery systems. With over 15 years of experience, we specialize in developing and producing Long-Acting Injectables (LAIs) and other advanced pharmaceutical formulations. Our state-of-the-art R&D laboratory is staffed by a team of 20 highly skilled scientists, including pharmaceutical science, polymer engineering, and chemistry experts, who are committed to creating innovative and high-quality products.

At Varian Pharmed, as a part of the Golrang Pharmaceutical Investment Co., we pride ourselves on our stringent quality standards and competitive pricing. Our products are crafted using premium raw materials from reputable European suppliers, ensuring safety and efficacy. As a leader in the Middle Eastern market, we are now poised to expand our global footprint, offering our high-quality products to new markets.

Our commitment to excellence and innovation makes us a trusted partner for companies looking to enhance their pharmaceutical portfolios. We invite you to explore our range of products and discover how Varian Pharmed can add value to your business.

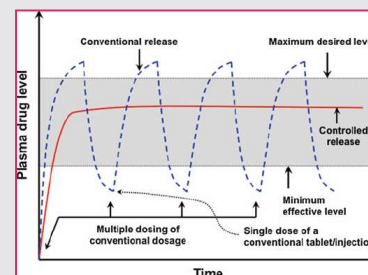

Our Technology

- We focus on Novel drug delivery systems (NDDS) and Extended-release medications.
- We have developed several Long-Acting Injectables, especially for the delivery of peptides and small molecules.
- Our technology is based on biodegradable in-situ forming gel depots in which a therapeutic agent is embedded in the Poly (lactic-co-glycolic acid) (PLGA)-based materials.
- In order to avoid inconvenient surgical insertion of large implants, injectable biodegradable and biocompatible polymeric particles could be employed for controlled drug delivery.
- In-situ forming gels are injected subcutaneously, creating a semi-solid depot that releases the drugs for the desired time.

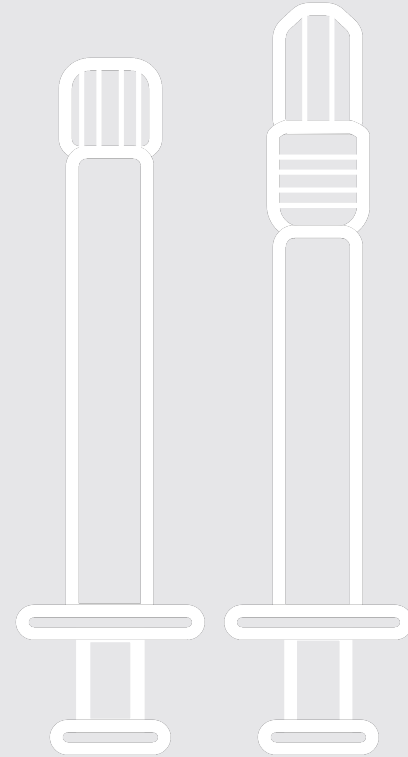

Advantages of Extended-Release Systems

- Controlling drug concentrations effectively
- Reducing the frequency of administrations
- Maximizing drug utilization
- Enhancing patient adherence
- Keeping drug concentration in the Therapeutic window.

Variopeptyl® 11.25 Triptorelin Pamoate

The novel formulation of Variopeptyl 11.25 mg with a longer release over a 3-month duration aims to reduce injection frequency, thus improving compliance and improving the patient's quality of life in a treatment that needs to be administered over several months.

Variopeptyl® 3.75

Triptorelin Acetate

Triptorelin 3.75 mg is a GnRH agonist used to treat prostate cancer and gynecological disorders such as Endometriosis and Fibroid. It is also used for treatment of Central Precocious Puberty in children.

Variopeptyl 3.75 is manufactured by In-situ Forming Implant technology and administered subcutaneously. This technology provides reduction in number of injections and increased patients compliance.

- Advanced prostate cancer
- Endometriosis
- Myoma
- Central Precocious Puberty (CPP)
- Breast Cancer (H+)
- Fertility preservation (prior to chemotherapy)

Leupromer® 3.75

Leuprolide Acetate

Leupromer offers flexibility with subcutaneous (SC) delivery since IM route of administration may not be suitable for all patients.

Leupromer is provided in two prefilled Syringes: Syringe A delivers high quality Swiss manufactured Leuprolide acetate and Syringe B delivers a German made polymeric solution.

Indications: Palliative treatment of advanced Prostate, Breast, Ovarian, and Endometrial Cancer (H+).

Women Endometriosis, Fibroids, Central Precocious Puberty (CPP)

- *Less frequent injections & patient visits*
- *More Compliance & Well tolerated*

Variotide LAR[®] | 30 Octreotide Acetate | 20

Variotide LAR[®] Depot is a Somatostatin analog. Variotide LAR[®] is indicated in patients who respond to and tolerate the Octreotide acetate for:

- Symptom and tumor control for patients with neuroendocrine tumors
- Treatment of the severe diarrhea and flushing episodes associated with metastatic carcinoid tumors
- Treatment of the profuse watery diarrhea associated with VIP-secreting tumors
- Treatment of acromegalic patients who have had inadequate response to or cannot be treated with surgery, radiotherapy, and bromocriptine mesylate at maximally tolerated doses (the goal of treatment in acromegaly is to reduce GH and IGF-1 levels to normal)

Buprenorphine ER | 100
300

•**Treating**
opioid addiction with once monthly Buprenorphine ER by subcutaneous injection
Buprenorphine ER should be used as a part of a comprehensive treatment plan that includes counseling.

•**Blocks**
the rewarding effects of opioids
Buprenorphine binds to opioid receptors in the brain, reducing the likelihood of other opioids binding.

•**Sustained**
levels throughout the month
Buprenorphine is delivered at sustained levels, maintaining steady levels in the bloodstream throughout the month.

Zol-Var® 4 mg Zoledronic acid

Zoledronic acid belongs to the family of medications known as bisphosphonates. It is used to treat multiple myeloma, bone cancer hypercalcemia and for patients with bone metastases from solid tumors. Zoledronic acid is also used to prevent or delay complications (e.g., bone fractures or bone pain requiring surgery or radiotherapy) due to cancer that has spread to bones (bone metastases) from different types of tumors and multiple myeloma.

Always with Ifosfamide, often with Cyclophosphamide

Vario-Mitexan®

Mesna 400 mg / 4 ml

Indications

Prevention of urinary tract toxicity by ifosfamide or cyclophosphamide.

Contraindications

Known hypersensitivity to mesna or other thiol compounds. The occurrence of hypersensitivity reactions (hyperergic reactions) following mesna administration has been reported more frequently in patients. Protection of the urinary tract with Vario-Mitexan® should be undertaken only in such patients following careful risk-benefit analysis and under medical supervision.

Finding the right analgesic has never been simple

Pyromol[®] 1g / 6.7ml
Acetaminophen 150_{mg/ml}

2x
Higher Pain Relief
Vs Placebo following Cardiac Surgery

70%
Less Pain
15 minutes following administration in acute renal colic

What is Pyromol[®]?

Pyromol[®] is an effective analgesic and antipyretic used to treat pain and fever in patients.

Pyromol[®] is indicated for the management of mild to moderate pain, management of moderate to severe pain with adjunctive opioid analgesics and reduction of fever.

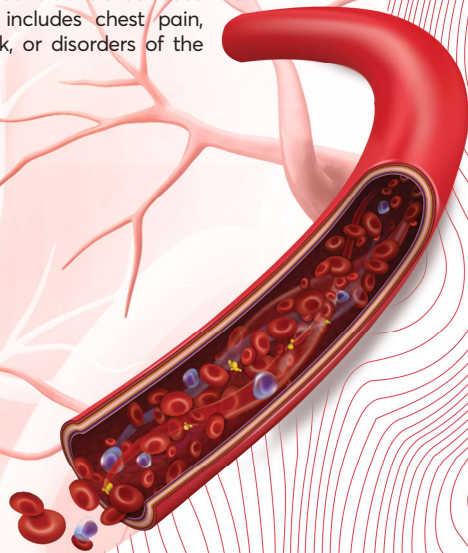

- First line recommended therapy in treating acute and chronic pain
- Recommended for control of fever
- Can be safely prescribed for pain relief during pregnancy and lactation.
- First choice non-opioid analgesic in elderly patients

Papaverine Vario 40

Papaverine HCl 40 mg/ml

Papaverine is a vasodilator that relaxes smooth muscles in your blood vessels to help them dilate (widen). This lowers blood pressure and allows blood to flow more easily through your veins and arteries.

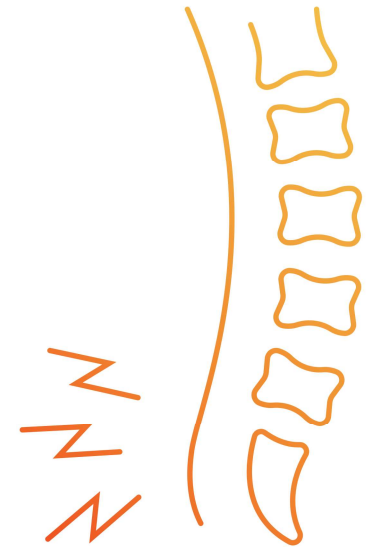

Papaverine is used to treat many conditions that cause spasm of smooth muscle. This includes chest pain, circulation problems, heart attack, or disorders of the stomach or gallbladder.

Ketorolac | 30

Ketorolac Trometamol | 15

Ketorolac is a nonsteroidal anti-inflammatory drug (NSAID) and is used for the short-term treatment of moderate to severe pain in adults.

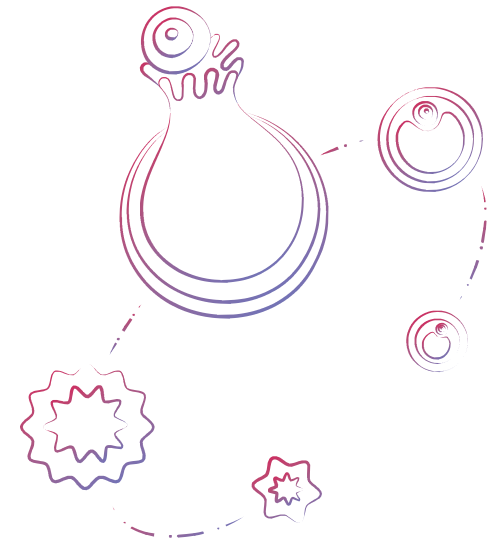

Dexpanthenol Vario®

Dexpanthenol is an alcoholic analogue of D-pantothenic acid that is used as a supplement or application to support a healthy epithelium and is also used to prevent vitamin deficiency in patients receiving total parenteral nutrition (TPN).

CetroArt® 250_{mcg} Cetrorelix Acetate

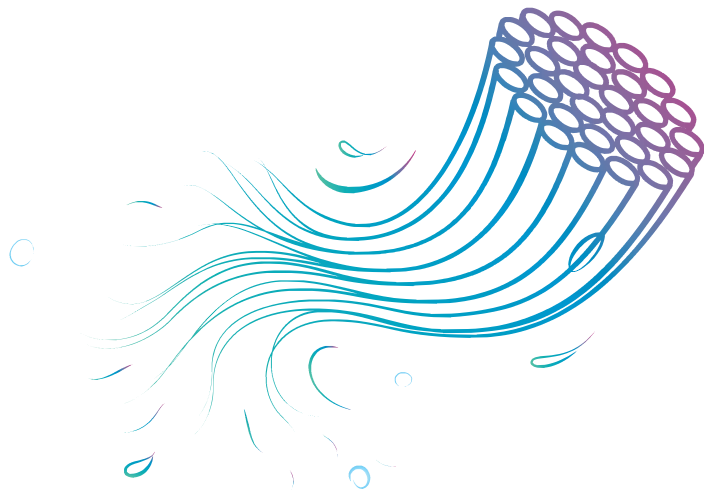

Cetrorelix acetate is a synthetic decapeptide with gonadotropin releasing hormone (GnRH) antagonistic and used for certain fertility treatments. Cetrorelix stops eggs from being released too early and gives the eggs time to grow properly.

Methocarbamol

1g/10ml

Methocarbamol is a muscle relaxant. It works by blocking nerve impulses that are sent to your brain. Methocarbamol is used with rest and physical therapy to relieve pain and discomfort caused by strains, sprains, and other muscle injuries.

Ondansetron | 8

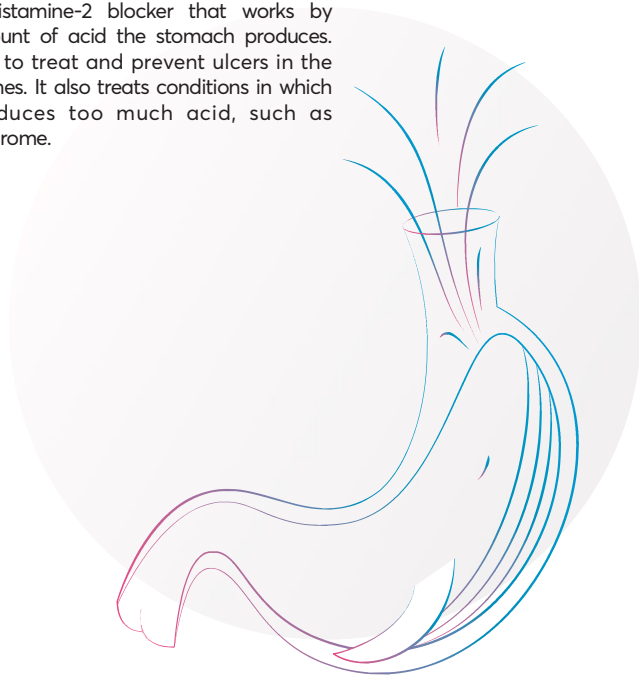

8mg/4ml & 4mg/2ml | 4

Ondansetron blocks the actions of chemicals in the body that can trigger nausea and vomiting. Ondansetron is used to prevent nausea and vomiting that may be caused by surgery, cancer chemotherapy, or radiation treatment.

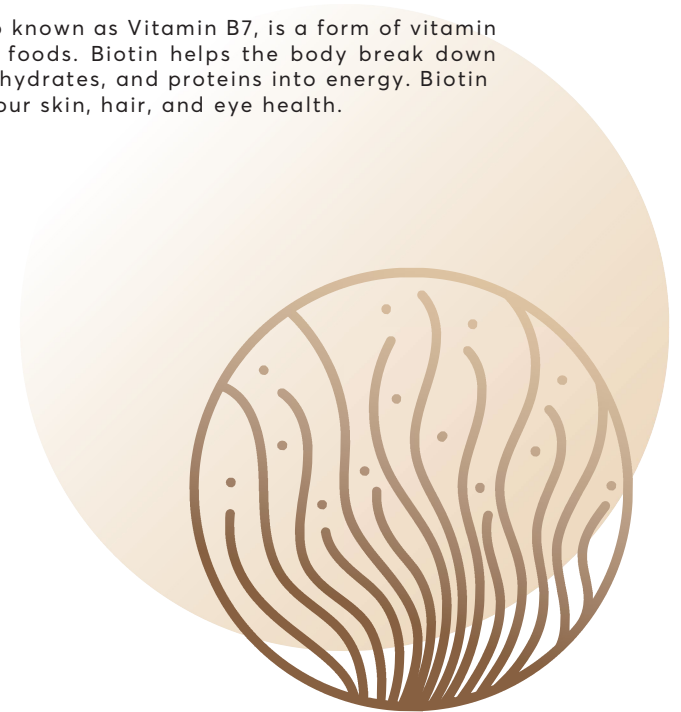

Famotidine 20

Famotidine is a histamine-2 blocker that works by decreasing the amount of acid the stomach produces. Famotidine is used to treat and prevent ulcers in the stomach and intestines. It also treats conditions in which the stomach produces too much acid, such as Zollinger-Ellison syndrome.

Biotin Vario®

Biotin, also known as Vitamin B7, is a form of vitamin B found in foods. Biotin helps the body break down fats, carbohydrates, and proteins into energy. Biotin supports your skin, hair, and eye health.
